PROFESSIONAL EXPERIENCE

GROUND SHATTER

Junior Programmer

July 2022 – July 2024, May 2026

Contributed across the full production cycle of turn-based strategy Knights In Tight Spaces. Developed in Unity using C#. Independently navigated codebase to create and expand gameplay systems, building features to match designer specifications. Expanded the simulation stack storing entity attributes at different stages of turn-based combat. Implemented multiple UI screens set up for mouse, keyboard and gamepad input. Directly worked with other departments to integrate art and audio assets. Created custom editor displays to expedite asset development. Briefly returned for contract role on sequel 2 Fights in 2 Tight Spaces.

LIGHT & WONDER iGAMING

Junior Client Developer

December 2025 – April 2026

Performed frontend development on web games for desktop and smartphone, using TypeScript and Node.js. Developed flagship IP title Action Bank: Money Lock, launching simultaneously as iGaming and retail versions. Iteratively developed project in Agile methodology while handling assets and feedback from transnational studios. Owned development of substantial Free Spins features, ensuring recoverability.

INDEPENDENT PROJECTS

MIRAGE HIGHWAY

Unreal Engine - C++

Endless runner with procedural levels, built from chunks that can have individual variants applied. Level chunks can be assigned random weighting, and specify gameplay type for use in level generation. Used pooling system to manage pointers for dynamically spawned collectibles. Built generic behaviour components for flexibility in creating enemies.

DUNGEON GENERATOR DISSERTATION

Unity Engine - C#

A Unity framework for designing procedural, top-down dungeon levels, with a focus on human authorship over procedural content. Set up generation settings as a generative grammar, expressing designer input in the vocabulary of gameplay as an array of nodes representing individual rooms. Supports integration of hand-built and randomised content, alongside difficulty scaling and thematically cohesive enemies per room.

ABOUT ME

Hello! I have loved games all my life, my taste formed by Flash, PS1 and Nintendo games. All-time favourites include UFO 50, LittleBigPlanet and the Crash Bandicoot quadrilogy. Watching YouTube videos about game design and development informed my appreciation for the artistry in game dev. I love the elegance of simple game mechanics executed to a high standard.

Outside work, I'm a fan of comedy and films – my favourite being The Blues Brothers. I am a music lover, listening to hip-hop and rock and playing Alto saxophone to Grade 8 standard. I also love to run, hike and go bouldering. I run an Instagram account, @8bitalbumcovers, posting pixel-art remakes of album covers to over 5000 followers.

BACKGROUND

2.5 years' commercial development experience across multiple studios – 2 years in Unity/C#, 5 months in TypeScript.

Graduated from the University of the West of England with a **First-Class BSc (Hons) in Games Technology**. Received university award for Best Performance in BSc Games Technology.

Nominated for both 'Games Technology' and 'Programming' categories at the TIGA Graduate of the Year awards.

Eager to contribute meaningfully to software projects in a role that pushes my technical and creative capabilities.

SKILLS

Languages: **C#**, **C++**, Blueprints (Unreal Engine), TypeScript, JavaScript, CSS, HTML, Python, GDScript, HLSL.

Technologies: **Unity**, **Unreal**, Godot, Git Bash, Node.js, Pixi.js, Howler.js, Microsoft Azure Speech, Plastic SCM, JIRA, WebSockets, Aseprite, Photopea, GIMP, Ink.

Strong familiarity with **interpreting design specs**, applying understanding of game UX to **address and interpret design ambiguity** to work out intended game outcomes.

Strong understanding of software **UI/UX principles**, and familiar setting up **complex UI Widgets in Unity**.

Confident operating independently on high-level tasks, reporting to others as needed but **proactive in finding creative solutions** when complexities arise

Adept with applying **OOP principles**, including MVC and ECS paradigms, to deliver scalable and reusable code.

Experienced **leading iterative development of gameplay mechanics** and running playtesting sessions.

Maintains **concise yet technically descriptive communication** with others to collaboratively address problems.

Direct experience with **Agile and Waterfall development** methodologies, understanding use cases for each.

Experienced with **profiling tools** for performance optimization.
